INTRODUCING OUR LATEST TECHNOLOGY...

HAAS VF-3 VERTICAL MACHINING CENTRE

Texco Engineering's continued growth has created the need for extra capacity and latest technology, hence the purchase of the new Haas VF3 4 axis machining centre. This machine has an abundance of features and superior performance, whilst providing more flexibility and speed than ever imagined.

We are excited to have this specialised machine added to our CNC turning and machining group of machines and look forward to further assisting our present and new clients in their growth for the future.
